**Now Offering Mole Mapping**

We are pleased to announce that Tulane Dermatology offers Mole Mapping as a service available to your patients. It is a painless and noninvasive tool utilizing high resolution digital photography & dermoscopy that is used to track changes in moles as well as early detection of melanoma. This technology is the first of its kind in the region and will be employed under the guidance of Dermatologists at Tulane. Patients can share their valuable results with you, as their primary dermatologist, which will enhance your ability to follow patients at risk for melanoma.

If you would like to learn more about this service please call: 504-988-2740.
